

A Maian Update

Tuesday, 08 September 2009

Maian Music's Joomla integration is about reach a full year and from doing a google search there are a lot of sites out there using this software. I haven't been on the support board that much in the past month because of my hectic schedule and other commitments. For a majority of users the Beta version is working however there are some bugs that have been popping up in the the most current version 1.3.7. I am aware of the bugs that have been posted to the bug tracking software and as soon as my schedule let's up i am going to go though them all. I have been holding off on releasing another update until i go though the support forum and the bug tracking systems to address all of the issues that are outstanding. i would liek to tahnk everyone of there patcience during this phase of developemnt.

Even thought Maian Music for Joomal is about a year in I feel that there is still a long way to go. I do have plans for updates and to extend the functionatily beyond it's current state. In the meantime i have updated the module for joomla 1.5 and added the abiltiy to show a single artist album list. It currently groups the albums by the artist name but eventually this will change to link to an users profile. There have also been a number of user that have contributed language files. This is very much appricated and link back have been provided to the author's websites. This is it for now but in the future i will try to update everyone on the progress made so far.
